

March 17<sup>th</sup>, 2021

## **PRESS RELEASE- FOR IMMEDIATE RELEASE**

The Sulphur Fire Department conducts semi-annual hydrant inspections and flow testing during the months of March and September. These inspections are currently being conducted and are necessary to maintain and monitor the health of the City's water system by identifying problems, flushing sediment buildup from the water mains, and evaluating water pressure and volumes used in evaluating firefighting capabilities. If you notice discoloration in your water, we encourage residents to run water for a short period of time until it is clear. In order for us to isolate the areas that do not clear please call 337-527-4582. The water is tested monthly by the Louisiana Department of Health and Hospitals – Office of Public Health, however we ask residents to call the water plant so we can identify areas that experience discolored water by address.
